

Basic Petroleum Technology - BPT

COURSE

About the Course

This course provides the participant with an understanding of basic petroleum technology in the context of the Petroleum Value Chain and Asset Management, from exploration to abandonment. Unconventional shale (tight oil and gas) and conventional oil and gas are covered. The participant will understand how and when geoscience and engineering professionals use technology to determine and then optimize the economic value of an oil and gas field. This enables the participant to maximize their professional and administrative contribution in their organization. Participants first learn and understand why various global oil and gas production types and plays (unconventional and conventional) have different value. The participant learns which technologies are used by the geoscience and engineering departments during each stage of the asset life cycle and WHY! This E&P lifecycle context accelerates an understanding of basic petroleum technologies and the oil industry. This learning is achieved through guided discussions, videos, animations, and progressive team exercises utilizing 'Our Reservoir' and 'Our Well' as working models.

This course is also available in a 100% online, on-demand format.

"I felt that it was a great course and perfect for my first year as a working geologist." - Geologist, United States

"The instructor did a great job and brought a ton of industry knowledge. I feel privileged to have attended this class." - Lead Contracts Engineer, United States

Target Audience

This course is appropriate for those who need to achieve a context and understanding of E&P technologies in conventional and unconventional fields, and/or the role of technical departments in oil and gas operations, and/or be able to understand and use the language of the oilfield.

You Will Learn

- The E&P Process and how it differs in conventional vs unconventional plays, the role of each technical department and specialist, and the technologies used
- The economic value and properties of reservoir fluids
- Petroleum geology for exploration and production
- About oil and gas reservoirs, both conventional and unconventional, and understand the key differences
- Exploration and appraisal technologies

- Drilling operations for exploration, development and production
- Production - well completions and production technology
- Reservoir recovery mechanisms through primary, secondary, and tertiary recovery
- Surface processing of produced fluids

Course Content

- World hydrocarbon production and consumption review including reserves, benchmarks, and the impact of shale resources
- Reservoir fluid properties
- Petroleum geology
- The petroleum reservoir, conventional and unconventional
- Exploration technologies for conventional and unconventional reservoirs including initial reserve estimates and consequent field development
- Drilling and operations
- Well completions and workovers
- Production operations
- Reservoir recovery mechanisms
- Surface processing

Product Details

Categories: Upstream

Disciplines: Multi-Discipline Training Unconventional Resources

Levels: Basic

Product Type: Course

Formats Available: In-Classroom

Instructors: Gerry Ross Ron Hinn William (Bill) Powell
