

## **Petrophysics of Unconventional Reservoirs - PUR**

#### COURSE

#### **About the Course**

Petrophysics is central to the integration of a wide spectrum of related geoscience and engineering disciplines. However, students should also be familiar with at least two or more of the following topics: horizontal well drilling, wireline logging and log analysis, coring and core analysis, petrophysics, geophysics, geochemistry, formation testing, rock mechanics, hydraulic fracturing, and petroleum economics.

# **Target Audience**

Geoscientists involved with the evaluation and exploitation of unconventional reservoirs including tight gas sands, shale gas, and coal-bed methane.

### You Will Learn

Participants will learn how to:

- Interpret petrophysical data gathering from unconventional reservoirs from both core and log data
- · Assess TOC and maturity indicators
- Evaluate measurement provided by service companies
- Gauge gas-in-place and reserves in unconventional reservoirs
- Recognize consequences and magnitudes of shale anisotropy
- Interpret NMR and capillary pressure measurements made on shale
- Interpret microstructural imaging of shale

#### **Course Content**

- Overview of unconventional reservoirs
- · Geochemistry of unconventional rocks
- Special coring and core analysis techniques for unconventionals
- Wireline logging of unconventional reservoirs
- Assessment of formation organic content (TOC) and maturity
- Gas-in-place and reserve and flow potential estimates
- · Geomechanics and fracturing

## **Product Details**

4/26/24, 3:44 PM

Categories: <u>Upstream</u>

Disciplines: Petrophysics Unconventional Resources

Levels: <u>Intermediate</u>

Product Type: <u>Course</u>

Formats Available: <u>In-Classroom</u>

Instructors: PetroSkills Specialist Jeff Hamman John Sneider

# **In-Classroom Format**

8 Jul '24 10 Jul '24 - | Course | In-Classroom (in Houston)

\$3,595.00
