

Waterflood Planning

MODULE

About the Skill Module

In this skill module, we discuss the data and design elements to planning an effective waterflood operation.

[See demo online learning module](#)

Target Audience

Reservoir, production, facilities, and operations engineers who are involved with some aspects of a new or existing waterflood project; geoscientists and professionals who want to get a better feel for the entire process of planning, development, management, and recovery optimization of a waterflood project.

You Will Learn

You will learn how to:

- List the kind of data needed to plan a waterflood
- Explain how to measure the importance of missing data
- Describe how to pay for the collection of important data
- List the choices that need to be considered in creating a robust waterflood design
- Explain why an exit strategy is important
- Describe how to create a waterflood design that will be relevant more than 2 days after startup
